Devices and the Internet

Reading Exercise

The Internet has become an important part of most people's lives because it's used for communication, information, and entertainment. Billions of people around the world send e-mails, chat online, read the news, and even play games. However, some people become addicted to the Internet. These people **withdraw** from the real world and spend more time alone.

Some psychologists state that people who use the Internet too much already have a mental illness. In other words, they already have a gambling problem, or **prefer** to play games instead of work. However, some psychologists believe Internet addiction is real, and doctors should see it as a mental **disease**.

South Korea thinks this Internet disorder is **serious** because children stop going to school to play games online. Even worse, some gamers have died after playing games online for many days without sleep!

In South Korea, there are counseling centers and treatment programs at hospitals for people with an Internet addiction. A rehab center also recently opened too. At the center, as part of a twelve-day program, **participants** cannot use computers. They may only use a cell phone one hour per day. The program is so popular that people are turned away because there isn't any **available** space.

Devices and the Internet

Reading Comprehension

True or False

- A. The Internet is used for communication, information, and entertainment.
